A screenshot of a software interface showing a list of metadata fields. The interface includes a search bar, a 'Store Record To' field, a 'Range' dropdown, and several tabs: 'Classic', 'Enhanced', and 'JSON'. The main area displays a list of fields with their IDs and values. A red arrow points to the entry '@ 110 FormItem'.

Same label, different LDR/008 combination

Fixed-length data elements (008) vary by material type format (Leader position 6, @45, “Rec Typ”)

https://csdirect.iii.com/sierrahelp/Default.php#sgil/sgil_lists_specify_criteria_spflds_bib.html

Also, 006 and 007 (for accompanying materials and additional material characteristics) have many of the same data elements with same labels

Uses?

Assigning form/genre terms

@275-278 (Nature of contents -- language material)

Find materials of certain formats not otherwise coded in Sierra

@274 (form of item for 'language materials' aka books)

Find other features not necessarily recorded elsewhere

LitForm, Ills, Indx ...

What is a Regular Expression?

> greater than
= equal to
< less than
!= not equal to
<= less than or equal to
N not within
W between
H has
A All Fields don't have
O At Least one Field does...
R matches
^ starts with
\$ ends with

What is a Regular Expression?

A *regular expression* (**RegEx**, **regex**, **regexp**, aka **rational expression**) is a sequence of characters that define a search pattern. (adapted from Wikipedia)

- DDMMYYYY

What is a Regular Expression?

A *regular expression* (**RegEx**, **regex**, **regexp**, aka **rational expression**) is a sequence of characters that define a search pattern. (adapted from Wikipedia)

- DDMMYYYY
- XXX-XXX-XXXX

What is a Regular Expression?

A *regular expression* (**RegEx**, **regex**, **regexp**, aka **rational expression**) is a sequence of characters that define a search pattern. (adapted from Wikipedia)

- DDMMYYYY
- XXX-XXX-XXXX
- oc, ocm, or ocn followed by digits

What is a Regular Expression?

A *regular expression* (**RegEx**, **regex**, **regexp**, aka **rational expression**) is a sequence of characters that define a search pattern. (adapted from Wikipedia)

- `[0-3][0-9][0-1][0-9][0-9]{4}`
- `([0-9]{3}-[0-9]{3}-[0-9]{4})`
- `oc[m-n]?[0-9]+`

RegEx has multiple 'flavors'

Different programming languages or engines use some different syntax and/or metacharacters

- Perl Compatible Regular Expressions (PCRE)
- Javascript
- Python
- Golang
- etc.

Literal character = stands for the actual character

Metacharacter = stands for a class of characters, or some kind of function

RegEx 101

[Regular Expressions in Practice](#) (webinar)

[RegEx101.com](#) (sandbox/reference site)

A very incomplete RegEx primer for Sierra

<code>^</code>	starts with	<code>[0-9]</code>	any numeral
<code>\$</code>	end of a line	<code>[a-z]</code>	any letter
<code>()</code>	set or group	<code>*</code>	any number of times (even 0)
<code>[]</code>	valid characters (escaped)	<code>+</code>	one or more times
<code>[^z]</code>	not character z	<code>{x}</code>	x times
<code>.</code>	any character	<code>{x,y}</code>	from x to y times

For example

<code>^this</code>	<i>Starts with "this"</i>	
<code>[0-9]{13}</code>	<i>13 digits</i>	
<code>[0-9]{9}([0-9] x)</code>	<i>9 digits, then a digit or an 'x'</i>	10 digit ISBN
<code>.{5}</code>	<i>Any five characters</i>	
<code>colou?r</code>	<i>color OR colour</i>	Could also use: <code>colou{0,1}r</code>
<code>[0-9]{4}[a-z]{4}</code>	<i>Any four digits any four letters</i>	
<code>[.]\\$</code>	<i>Field ends with a period</i>	
<code>.*</code>	<i>Anything at all</i>	Usually nested inside/between other criteria

RegEx can be *greedy* or *lazy*

Suppose we want to find words ending with “s”

Badgers badger racoons (. *s\$)

Badgers badger racoons

(.*s\$)

Greedy RegEx sees the whole line as one match

Badgers badger racoons

(.*s\$)

UnGreedy (or Lazy) RegEx
sees two matches -- the first
word and the rest of the line

Badgers badger racoons

([a-z]*s\$)

Workaround: Specifying letters ([a-z]) rather than anything (*)

Take a quiz?

Goto Kahoot.it

Enter the code that comes up on the screen

<https://play.kahoot.it/#/?quizId=3673572d-903e-4618-b2da-8d6a606a86b3>

What does the variable-length field “look” like in Sierra?

Searching by field group tag (a,b, c, etc.)

24510|aSome title /|cby Some One

Searching by MARC tag (!...)

24510Some title /|cby Some One

So... we can look for MARC tags and indicators as well the contents of the field

Entering a RegEx in Create lists

- Condition: “Matches” (R)
- No need to precede expression with / or ~
- Can search a field group or a MARC tag
- Searches ENTIRE field

Problem 1: Tag mismatches

Error in processing electronic resources led to MARC tag 740 being added as a “call number” field group tag.

How can we find all instances if we're not sure that there is something in common in the field? How can we check for other similar problems (for example, hand-keyed fields with field group/MARC tag mismatch?)

Bonus:

Find Non-MARC fields

Starts with [a-z], or numbers other than expected MARC tags

Problem 2: Searching for a special character

“Curly brackets” are not indexed and do not show up in browses, but can occur in the catalog when there are problems with the encoding of special characters, nonroman fonts, etc.

We’d like to be able find occurrences of { or } in headings since they are most often an artifact of encoding problems.
